

# Functional/Nonfunctional Requirements

## Functional

- Users must be able to register either as novice or expert
- Users must be able to specify categories and skills that they either need or possess
- Users must be able to upload avatar images
- Users must be able to specify dates/time that they are available to 'meet'
- Experts must be able to specify experience
- Users should be able to edit their profiles

## Nonfunctional

- Web application so users will need to be connected to the web
- Good ux/ui! Users should be able to quickly understand how the website works and be able to navigate their way around intuitively
- Should be scalable. I.e. no reason to limit it to DIY - that is just a starting point.

## Would be nice/Future developments

- Mobile responsive.
- A payment system so experts could charge for their time. Monetize app by taking a percentage of each transaction
- System for rating experts, along with testimonials that can be included on their profile page
